CHECKLIST

CHEMTECH

MARCH 1989

"What can I do with my chemistry degree?" 136 ☐ The answer, according to **Friesen,** amounts to more than 500 possibilities.

Seveso: Inflation of fear 139 ☐ Dioxin was spread all over the Italian countryside by a plant explosion in 1976. Here's **Donnelli**'s rare look at the effects, more than a decade later.

Problem solving: A coordinated approach 148 ☐ Kids know how to get answers, but they don't know how to solve problems. That's the problem **Hill** tackles in this first of a series.

Market-oriented R&D? 152 ☐ There's nothing worse than creating a product for a nonexistent market. **Lantos** shows how R&D can avoid doing that.

Patents, price, and patient interests 156 ☐ A 1984 law is having profound effects on industry. **Miller** and **D'Angelo** explore them.

New vistas for membrane technology 162 ☐ As in life processes, membranes are proving to be ubiquitous in industry. **Michaels** exemplifies.

Catalyst design: Multicenter surface sites 173 ☐ Is catalyst development dumb luck, or does it really make sense? **Iwasawa** and **Gates** go for the latter.

Recent advances in organic resist materials Part 2 182 ☐ What microelectronics owes synthetic organikers is illustrated by **Willson** and **Bowden** in this concluding article.

---

129 ☐ **The Industrial Chymist** in which **Luberoff** reveals the true meaning of ASAP.

130 ☐ **Heart Cut** in which **Dolbear, Piccolini,** and **Sivaram** get excited about Hammett constants for metals, electrically conducting rubber, and phase-transfer oxidations.

134 ☐ **The Best of '88** in which we recognize authors of CHEMTECH's highest impact papers.

143 ☐ **Guest Editorial** in which **Newnham** attacks America's orientation toward a service economy.

OBC ☐ **The Last Word** in which you're asked to guess the company.

Volume 19, No. 3, pages 129–192 ISSN 0009-2703 CHTEDD

CHEMTECH (ISSN 0009-2703) is published monthly by the American Chemical Society at 1155 16th St., N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing offices. POSTMASTER: Send address changes to CHEMTECH, Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210.

Subscriptions—1-year prices: Members, $37; Nonmembers (individual personal use), $65; Companies, institutions, libraries, $282; Student members, $17; Mexico and Canada add $6/year for postage. Europe add $13/year for postage. All other countries add $14/year. Foreign subscriptions are sent by air freight. Send payment to ACS Controller, 1155 16th St., N.W., Washington, D.C. 20036. Single copies, $21 (current), $28 (pre-1989). Phone orders can be placed for printed, microfiche, and microfilm editions by calling, toll free, (1)(800) 227-5558. From Washington, D.C., call 872-8065. Visa, Master Card, and American Express accepted. Nonmember subscribers in Japan, enter subscriptions with Maruzen Co. Ltd., 3-10 Nihon bashi 2-chome, Chuo-ku, Tokyo 103, Japan; (03) 272-7211.

Editorial Matters: Refer all editorial matters to Dr. B. J. Luberoff, Editor, CHEMTECH, ACS, 1155 16th St., N.W., Washington, D.C. 20036.

Advertising Sales: Centcom, Ltd., 500 Post Road East, Westport, CT 06880; (203) 226-7131.

Service: For change of address, send old label with new address to ACS Membership and Subscription Services, P.O. Box 3337, Columbus, Ohio 43210. Allow 6 weeks to effect change. Refer claims for missing issues, information on status of accounts, etc., to this office.

CHEMTECH

JUNE 1989

Promoting organizational excellence 328 ☐ A mere dozen actions can bring excellence to your outfit. They're listed by **Lowenstein,** whose outfit uses them.

Who is the inventor? 330 ☐ There's an important difference between determining the names that appear on a scientific paper and those on a patent. **Morrissey** shows how interdisciplinary R&D emphasizes this distinction by looking at the chemist–biologist team.

Japan's choices 336 ☐ Somebody's gaining on Japan. To learn who, and with what results, read **Drucker**'s analysis.

ADRs: Your ticket to investments around the world 340 ☐ Foreign companies, unlike those in the United States, don't let voting stock out of their countries. How you can invest abroad is explained by **Goodman**.

Living together 344 ☐ What happens when companies come out of their shells and work together with their neighbors is related by **Crampton.**

Yes, Virginia, there is value in chemistry 350 ☐ Here's a course that's about chemicals, instead of about chemistry. It's taught by **Kooser** to those who will be consumers.

Changing concepts in cancer prevention 354 ☐ Maybe the solution for eliminating cancer does not lie solely in eliminating the carcinogens that surround us. Maybe the answer lies in interrupting the carcinogenic process. So suggests **Higginson,** whose definition of "environmental carcinogens" caused so much mischief 20 years ago.

Can microbial pesticides lick resistance? 363 ☐ Because agricultural pests breed so rapidly, resistance to chemical pesticides develops faster than we can generate new synthetic pesticides. Would using microbial pesticides help? **Briese** explores the parameters that will determine the answer.

Ready for the market: An intriguing class of coatings 368 ☐ How a CHEMTECH article in '72 led to new products in '89 is related by **Griffith** and **Brady,** whose functional fluoropolymers are making it.

Crystallization for bioseparations 376 ☐ This chapter from **Cussler, Belter,** and **Hu**'s book on processes useful for biotechnology describes how to take crystallization from lab to plant.

321 ☐ **The Industrial Chymist** in which biotech's penultimate problem is revealed.

323 ☐ **Write On** in which **Miner** surprises and **Hartford** reveals the thermodynamic argument against zero risk.

324 ☐ **P.S.** in which there's more about research spending, fuzzy logic, and serendipity.

325 ☐ **Heart Cut** in which **Dolbear, Piccolini,** and **Young** tell about transparent calculators, rugged organic conductors, and phase-transfer catalysis in a membrane reactor.

343 ☐ **Guest Editorial** in which **Koshland** brings cold-blooded reason to warm-blooded humanities.

374 ☐ **Out in the Plant** in which the **pHantom pHormulator** says you can formulate successfully without a lot of fancy equipment.

OBC ☐ **The Last Word** in which CHEMTECH's poet laureates **Liebson, Roman,** and **Snow** display their talents.

JULY 1989

Getting the job done 390 ☐ Executives have to make the darndest decisions. Here's how consultant **Half** recommends you handle some key ones.

Never too old 392 ☐ Look what Delaware's retirees are up to! **Skolnik** illustrates what a local ACS section can do.

Chemical patent practice 394 ☐ Ever thought of going into law, patent law in particular? You don't need a law degree. **Dabek** shows what it's like.

Managing safety 400 ☐ Like sermons on death and taxes, no one wants to hear about safety. **Jacobs**'s positive approach overcomes that reluctance.

Problem solving: The control approach 403 ☐ The mind set we bring to a problem directs the solution. Here **Hill** continues his tutorial on selecting the most efficient mind set.

Managing quality 412 ☐ When customers demand products made under statistical quality control it's time to learn the techniques. **Hess** teaches them.

Developing chemical engineers in Japan and in the United States 418 ☐ Technologists in Japan aren't educated like Americans are. **Floyd** points up the significant differences.

Performances rewarded: Winners of Japan's Okochi Medal

Making phenolic resin fibers 424 ☐ Until **Gun-ei Chemical** workers proved otherwise, people doubted that fire retardant phenolic fibers could be drawn.

Making interferon 428 ☐ How **Toray** technologists developed a process for a product with a then-unknown structure is a fascinating biotech story.

Making a rice paddy herbicide 431 ☐ If weeding your garden seems a chore, think what it's like to weed the rice paddies that feed half the world. Thanks to teams at **Utsunomiya University** and **Mitsui Toatsu** the job's easier.

Use surfactants to blend polymers 435 ☐ Creating the polymer equivalent of metal alloys requires a whole new way of operating. **Gaylord** teaches what polymer chemists need to know to succeed.

Coal gasification plus 444 ☐ The best way to use coal is to gasify it first. **Spencer, Alpert,** and **Gluckman** show how.

385 ☐ **The Industrial Chymist** in which **Luberoff** shows how to use thermodynamics to gain social insight.

386 ☐ **P.S.** in which everybody expresses dissatisfaction with local education.

387 ☐ **Heart Cut** in which **Dolbear, Hendrickson,** and **Picolini** reveal means to fluorinate, separate, and sonicate.

389 ☐ **View from the Top** in which **Brown** cautions firms not to condition R&D funding on today's sales.

391 ☐ **The Division Page** in which **Dolde** provides some dandy sources of information.

397 ☐ **Guest Editorial** in which **Calton** explores what technical types are really worth.

442 ☐ **Out in the Plant** in which the **pHantom pHormulator** explains that substitutes are not equivalents.

OBC ☐ **The Last Word** in which **Silver** provides 10 great ways to have it.

AUGUST 1989

Games physicists play 454 ☐ Yet another difference between physical scientists is discerned by **Thomsen.**

We *can* reach the public 456 ☐ The success of National Chemistry Day '87 provides a foundation on which to build National Chemistry Week this year **Wedin** says.

To err is human 458 ☐ Learn how to learn from error from **Rubinstein.**

"It is my duty to tell about this" 461 ☐ Here's what Academician **Legasov** wrote about Chernobyl before he took his life last year.

Biotechnological inventions 467 ☐ How come they issued a U.S. patent on a mouse? What led up to that decision is outlined by **Weiner.**

Global climate change 470 ☐ The earth and its atmosphere is as complex a system as we'll ever be called upon to analyze, much less deal with. Yet analyze and deal with it we must. **Gushee** shows how to begin.

Making powders and films from supercritical fluid solutions 480 ☐ Here's a whole new dimension in which to work. **Matson, Norton,** and **Smith** illustrate.

Hard copy materials 487 ☐ A look at the first commercial applications of organic electronic materials is provided by **Stolka.**

Olefin metathesis in industry: A status report 498 ☐ Just a dozen years ago **Streck** called this a "versatile tool." Now he examines why it's more than that.

Quality by design 504 ☐ Continuing our tutorial on statistical optimization, **Deming** turns us into intelligent six-year-olds.

449 ☐ **The Industrial Chymist** in which you, a technologist, are likened to a parent of the populace.

450 ☐ **Heart Cut** in which **Chalk, Hendrickson,** and **Soni** share their pleasure in finding out about microemulsions, O_2-rich air, and "products not subject to what goes on in oil prices."

466 ☐ **However** in which **Noether** describes her outlook on education.

496 ☐ **Out in the Plant** in which **pHantom pHormulator** reveals how to tell a hot project from one that "should have no beginning."

OBC ☐ **The Last Word** in which **Cogan** shows how to demonstrate perfect correlation.

The five o'clock effect 518 ☐ Who among us hasn't shared **Amato**'s sad experiences? (And who wants to tell us about theirs?)

Japan Inc. 521 ☐ Bet you'll be surprised at the best-selling book **Ishinomori** put together.

***Challenger:* A case of failure to communicate** 528 ☐ O-ring failure was car-pool conversation before the disaster. But management didn't know. Why they didn't is detailed by **Winsor.**

The role of the consultant in R&D 536 ☐ How to create a synergistic relationship with your consultant is outlined by **Kovac**.

Should we sue? 538 ☐ If you do you'll find **Dabek**'s primer on what to expect helpful . . . so helpful that you may not want to sue.

Toward silicon-based life: Zeolites as enzyme mimics 542 ☐ Catalysis is simply a matter of environment. **Herron** wonders whether inorganic environments can generate "organisms."

Alternative automotive fuels: Progress and prospects 549 ☐ It's now clear that if the Arabs don't get us the environment will. **Ecklund** and **Mills** suggest what we can do about that.

Surface science leads to new steel coatings 558 ☐ Another case of analytical chemistry paying for itself is laid out by **Cabrera** and **Kirner**.

What's impedance spectroscopy and what's it good for? 564 ☐ Investigating interfaces such as those involved in corrosion and its inhibition, answers **Growcock**.

Designing mixture experiments 573 ☐ As we venture further into markets for functional chemicals we encounter formulation problems. The **Agreda**s show how to deal with them.

513 ☐ **The Industrial Chymist** in which **Luberoff** turns wordsmith.

514 ☐ **Write On** in which we get a poem and a lesson in demographics.

515 ☐ **Heart Cut** in which **Schoch, Thyagarajan,** and **Torchia** select new knowledge on materials and describe a bargain data-manipulation program.

517 ☐ **View from the Top** in which **Callis** provides guidance on energy policy.

520 ☐ **Out in the Plant** in which we find out what Monsanto people do to beat out the competition.

OBC ☐ **The Last Word** in which **Barry** tells us what's wrong with American Education.

CHECKLIST

CHEMTECH
OCTOBER 1989

On the cover OFC ☐ Past presidents of the ACS, 1937. Rear: R. Adams, A. B. Lamb, J. F. Norris, E. R. Weidlein, I. Langmuir, C. H. Herty, E. Bartow. Front: L. Baekeland, W. McPherson, M. T. Bogert, W. A. Noyes, C. L. Reese.

O.K., let's talk 582 ☐ What happened in **Maruyama**'s lab demonstrates that everything important happens at the interpersonal level.

Improve quality while cutting costs 586 ☐ Here's a tutorial on Value Management from **Tylczak**'s new book.

Chemicals, cancers, causalities, and cautions 590 ☐ The developer of the **Ames** Test criticizes those who use its results wrongly.

Roger Adams: Chemist, educator, statesman 602 ☐ Adams catalyzed a lot more than hydrogenation, as **Kauffman** celebrates on this 100th anniversary.

Are we really teaching? 608 ☐ A new way to teach chemistry that's exciting is laid out by **Ciparick**.

You think your data say *what*? 610 ☐ Even though it's become easy to generate data, to grasp their full meaning we still have to wring it out. **Hendrix** illustrates.

Briefings

Ceramics and their composites 615 ☐ The emergence of this neglected class of materials reflects. . .and portends . . .the emergence of an abundance of technologies.

Organic materials for non-linear optics 620 ☐ Why organic polymerics are displacing silicates as the optical designers materials of choice is explained by **Tripathy, Cavicchi, Kumar,** and **Kumar**.

Alternative fuels: Progress and prospects 626 ☐ There's little doubt, as **Mills** and **Ecklund** rationalize, that we'll soon stop making motor fuels from oil. The question remaining is "When?"

Designing a bioprocessing facility 632 ☐ The promise of biotechnology cannot be realized until we build plants to use it; and doing so is "different." **Rao** and **Adey** delineate the ways and what to do about them.

577 ☐ **The Industrial Chymist** in which we examine the assumptions explicitly.

578 ☐ **P.S.** in which are cases of the impact of the "new patent law."

579 ☐ **Heart Cut** in which **Picolini, Sivaram,** and **Young** focus on gels, chirality, and custom synthesis.

599 ☐ **Guest Editorial** in which **Aftergood** cautions that the sky could, indeed, fall in.

OBC ☐ **The Last Word** in which **Kreps** gives consultants their due.

CHEMTECH

NOVEMBER 1989

Take my boss. . .please — **647** ☐ Laughter's been shown to help cure physical maladies. Can it also ease organizational difficulties? **Krohe** says yes. . .and no.

Hey, whadda ya know? — **654** ☐ So you think you're technically literate. O.K., try this exam from ***The Economist.***

Mergers and acquisitions in the environmental age — **662** ☐ When you buy into another firm you buy into its assets and its liabilities. **Conner** finds some liabilities you might overlook.

Growing a biotech business — **664** ☐ Here's the story of a start-up that's about to break even, as told by CEO **Laster**.

A grand adventure — **668** ☐ Creating a process is required before you can deliver any material to society. **Levenspiel** shows how that kind of creativity works.

Rocket motors that work — **675** ☐ The cause of the failure of *Challenger* wasn't simple nor was its fix. That insight is supplied by members of the NRC Redesign Panel, **Blumenthal, Anderson,** and **Stever**.

Develop reactions automatically — **682** ☐ A lab scale set-up to run, analyze, and optimize that special reaction is at hand, according to **Kramer** and **Fuchs**.

Alkylating aryl amines selectively — **690** ☐ Catalysis is the key—say **Burgoyne, Dixon,** and **Casey**—to producing a family of broadly useful compounds.

^{31}P NMR: A look at today, yesterday, and tomorrow — **698** ☐ Here's what we got when we asked ACS President **Callis** to give us a sample of his technical work. He reports with coauthors **Gard, Gard,** and **Burquin**.

641 ☐ **The Industrial Chymist** in which **Luberoff** sounds a bit discouraged.

642 ☐ **P.S.** in which we learn about soft landings. . .of tomatoes, and find out who won those free CHEMTECH subscriptions.

643 ☐ **Heart Cut** in which **Dolbear, Picolini,** and **Young** stress photochemistry, photodynamic therapy, and magic.

646 ☐ **View from the Top** in which is the position of an AIChE committee on the use of nuclear power.

650 ☐ **Well Said!** in which **Nadziejka** shows how to make technical writing an easy read.

658 ☐ **However. . .** in which **Noether** tells about recent books she's enjoyed, the kind you'd like to give. . . or receive.

660 ☐ **Guest Editorial** in which **Coulston** reexamines the rationale for banning DDT and finds it wanting.

OBC ☐ **The Last Word** in which **Reich** depicts your government at work in your interest.

CHEMTECH

DECEMBER 1989

Management by objection — **712** ☐ It seems the most encouragement **Kung Pao** has gotten lately came from CHEMTECH: "Well, yes. . . but. . ."

Midgley: Saint or Serpent? — **716** ☐ Now seen as pollutants, tetraethyllead and chlorofluorocarbons were once hailed as panaceas. To help us understand how this could happen, **Kauffman** takes us back to their beginnings, in this centenary celebration.

Do-it-yourself chemistry — **727** ☐ Since prevention is always more efficient than cure, **Hayward** and **Bates** decided to tackle chemophobia by inoculating kids against it. Here's how they did it.

How do you feel? — **730** ☐ Career burnout's what got **Morris** to face his feelings.

Know your competition — **734** ☐ "Even if you're on the right track, you'll get run over if you just sit there."—Will Rogers. "Don't look back; somethin' might be gainin' on you."—Satchel Paige. Look at your industry—**Amy Lovgren**.

Creating amorphous films — **740** ☐ Plasma-enhanced, chemical vapor deposition provides a means for laying down films of fascinating morphology. **Petrich** shows how the microelectronics industry makes and uses them.

Nonlinear optics and organic materials Part 2 — **747** ☐ Why organic polymerics are displacing silicates as the optical designers' materials of choice is explained by **Tripathy, Cavicchi, Kumar,** and **Kumar**.

Problem solving: The research approach — **754** ☐ What you do when you don't know what you need to know in order to get on with it is handled by **Hill** in the fourth part of his series on problem solving.

Surfactants from biomass — **758** ☐ Because interfaces are ubiquitous, interfacial agents are always in demand. How to make some interesting ones without using oil is illustrated by **Egan**.

705 ☐ **The Industrial Chymist** in which is **Luberoff**'s Miami disappointment.

706 ☐ **Write On** in which there's relaxation, law, and poetry. Where else could you get such a *gemisch*?

707 ☐ **P.S.** in which there's more on milk, microelectronic chem, and comics.

708 ☐ **Heart Cut** in which **Dolbear, Torchia,** and **Thyagarajan** capture wisdom on megasonics, metals amorphous, and measurements optical.

711 ☐ **View from the Top** in which there's a voice from the past, that of **Chief Sealth** of the Duwanish.

714 ☐ **Guest Editorial** in which Grady–Stack medalist, **Kanigel,** talks about interfacial agency.

732 ☐ **Out in the Plant** in which the **pHantom pHormulator** tells what it's like to deal with the USDA.

739 ☐ **However** in which **Noether** reveals how the public learned of "the tritium issue."

753 ☐ **Furthermore** in which **Conoco** prognosticates energy's futures.

764 ☐ **Index '89** in which you can locate stuff you read. . . and stuff you shoulda.

IBC ☐ **Authors' Guide** in which are instructions to enable you, too, to play the CHEMTECH game.

OBC ☐ **The Last Word** in which there's a lot of bull. . . by **Picasso**.

ETHYL GAS
GENERAL MOTORS

GENERAL MOTORS
introduces
ETHYL GAS
A Better Fuel for Motors

For years, in the great General Motors Laboratories, extensive experiments and exhaustive tests have been carried on to provide a fuel of greater efficiency than ordinary gasoline. And now General Motors is able to offer motorists this fuel whose marked superiorities have been tried and proved—Ethyl Gas.

Since the earliest days of the automotive industry, engineers have known that it would be possible to get greater power and economy from the use of petroleum fuels in internal combustion engines, if compression could be increased without a very objectional fuel knock developing in the motor.

This "knock" is an audible sign of the inefficient use of fuel and very often this same inefficiency in fuel combustion is present when no knock is heard.

Ethyl Gas totally eliminates the "knock" from automotive engines and as a result of removing this knock with its attendant loss of power, waste of gasoline and carbonization of cylinders—Ethyl Gas not only produces greater power from every atom of fuel, but also adds to the economy of maintaining and the pleasure of operating an automobile.

Ethyl Gas is produced by the General Motors Chemical Company of Dayton, Ohio—a subsidiary of the General Motors Corporation. As a product of such a company, and as a product of General Motors —Ethyl Gas can be received by the trade and the public with the utmost confidence.

Ethyl Gas can be obtained at the following filling Stations in Cincinnati

Gilbert Ave. & Rockdale Place
Eighth & Central Avenue
Clearview & Montgomery Road

General Motors Chemical Company, Dayton, Ohio
